Organic Goose, broccoli, berries & topinambur

Complete food for dogs of all ages and sizes

100g

Ingredients: fresh goose* (breast meat, neck, carcass, liver) 86%, red berries* 4%, broccoli* 3%, topinambur* 3% (jerusalem artichokes), chia seeds* 1.5%, minerals 1%, coconut oil*, salmon oil, Ascophyllum nodosum* (pure seaweed extract) *organic.

Additives (per kg) Nutritional additives: vitamin A 2200 IU, vitamin D3 180 IU, vitamin E 12 IU, cupric sulphate pentahydrate 1.6 mg, manganous II oxide 0.9 mg, zinc sulphate monohydrate 15 mg, sodium selenite 0.07 mg.

Analytical Constituents: protein 11.23%, crude oils & fats 6.5%, crude ash 1.8%, fibre 1.7%, moisture 78%. 118 kcal/100 g.

Ingredients	Description	Benefits for your pet
Goose	Goose is a great alternative to other more common poultry like turkey and chicken and it's also quite flavorful. It's officially a white meat despite its dark coloring. It provides a great source of minerals like copper, iron, phosphorus, selenium, and zinc.	Goose is an excellent dietary protein. It's high on glycine which improves overall skin health and fights joint diseases.
Brocolli	Broccoli is a cruciferous vegetable related to cabbage, kale and cauliflower. It's high in nutrients including fiber, vitamin C, vitamin K, iron, and potassium. It also boasts more protein than most other vegetables. Lastly, it's high in plant compounds associated with health benefits like sulforaphane.	In addition to being a low-calorie food, broccoli is also a great source of roughage (commonly called fibre) that helps to improve digestive health. Its vitamin K content promotes strong bones and is a great boost for puppies and kittens. The sulphur-containing compounds in broccoli have also been shown to help fight cancer development.
Topinambur (jerusalem artichokes)	Topinambur (also known as Jerusalem Artichoke) is a species of sunflower native to eastern North America. It's low in fat a good source of nutrients, particularly iron, magnesium, phosphorus, potassium, inulin, niacin, thiamine, folate and vitamins C and K.	Thiamine and potassium promote good muscle function and a healthy nervous system. Being rich in iron, topinambur is also very helpful for red blood cell production, while its inulin content promotes digestive health. Additionally, there's also been reported as a great fighter against bad cholesterol and high triglycerides.
Red berries	Red berries are loaded with antioxidants are very low in calories and fat and are among the healthiest fruits on the planet. They're a good source of fiber and Vitamins A, C, E, and K. This group of berries includes blueberries, raspberries, red currants, blackberries, strawberries and cranberries.	Red berries are rich in fibre and antioxidants such as anthocyanins, ellagic acid, and resveratrol. Besides protecting your pet's cells, these plant compounds help reduce disease risk and oxidative stress. They are a good source of fibre as well, as they slow down the movement of food through the digestive tract – thus reducing hunger and helping in weight management as well. Red berries also have strong anti-inflammatory properties and help stabilize blood sugar levels and insulin response.
Chia	Chia is an edible seed from the desert plant Salvia hispanica, grown originally in Mexico. Actually, the meaning behind its name is quite enlightening as to its beneficial properties: it means "strength". Chia is an absolute energy booster and contains healthy Omega-3 fatty acids, carbohydrates, protein, fibre, antioxidants, and calcium. Chia seeds are also hydrophilic: they contain a high amount of mucilage that allows them to absorb water and form a gel in the stomach that slows down the conversion of carbohydrates into sugar.	Chia's high protein profile makes them essential for tissue & muscle building functions and it also has a reducing effect on the appetite, which is amazing for overweight pets. Since they're highly absorbent, they also help keeping their body hydrated as well. Chia is also very rich in Omega-3 which helps repairing damaged tissue and restoring flexibility in the cell membranes, and also promoting heart health, efficient digestion, and bone strength.
Salmon oil	Salmon oil, like regular fish oil, is high in Omega-3 fatty acids. The primary Omega-3 fats found in salmon oil are eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA) and these are known to help reduce heart disease, improve brain health and reduce inflammation among many other things for our loved dogs and cats.	Some of the incredible proven benefits from salmon oil to our pets include: improved condition of the skin and coat, reduces inflammation that can lead to conditions like arthritis, helps preventing skin allergies, regulates the immune system, improves cognitive function in older dogs, lowers blood pressure and triglycerides, helps with Inflammatory Bowel Disease, fights heart diseases, reduces the appearance of joint problems. Furthermore, research has shown that DHA also helps in a better brain development in puppies and kittens.
Coconut oil	Coconut oil is extracted from mature coconuts and takes the form of an edible oil that can and should be used in human and pet food. It is a source of saturated fatty acids, most of which are Medium Chain Triglycerides (MCTs) - these have several benefits, including being a source of fuel and energy.	In addition to being an excellent energy source, coconut oil has also been shown to improve skin and coat, improve digestion and reduce skin conditions and allergic reactions. Furthermore, its fatty acids are incredibly helpful in cognitive function. According to many studies and finds, coconut oil may also be beneficial for preventing pest infections and for treating bites.
Ascophyllum nodosum (pure seaweed extract)	Ascophyllum nodosum, also known as egg-wrack, is a brown seaweed that can grow up to 2 meters long and that can be found mainly in the North Atlantic. It's most notable as a source of micro-nutrients, including over 60 minerals.	The combination of minerals and trace elements in Ascophyllum nodosum is incredibly useful to promote oral health and to prevent plaque. Its fibre, insoluble and resolute, acts as a brush cleaning up the stomach from bacteria, also working as an anti-inflammatory.
