

Goose & Beef with broccoli & topinambur

Complete food for cats of all ages

70g

Ingredients: Fresh goose* (breast meat, neck, carcass, liver) 48%, fresh beef* (muscle meat, heart, lungs, liver) 46%, minerals 1.5%, broccoli* 1%, topinambur* (Jerusalem artichokes) 1%, red berries* 1%, coconut flakes*, hemp oil*, Ascophyllum nodosum* (pure seaweed extract) *organic.

Additives (per kg) Nutritional additives: vitamin A 1000 IU, vitamin D3 100 IU, ferrous sulphate monohydrate 22 mg, cupric sulphate pentahydrate 1.5 mg, manganous sulphate monohydrate 1.5 mg, zinc oxide 25 mg, sodium selenite 0.1 mg, taurine 1300 mg.

Analytical Constituents: protein 10.5%, crude oils & fats 6%, crude ash 1.4%, fibre 0.6%, moisture 79.1%. 107 kcal/100 g.

Ingredients	Description	Benefits for your pet
Goose	Goose is an exceptional alternative to other more common poultry like turkey and chicken and it's also quite flavourful. It's officially a white meat despite its dark appearance. It provides a wealth of minerals like copper, iron, phosphorus, selenium, and zinc.	Goose is an excellent dietary protein. It's high on glycine which improves overall skin health as well as fighting joint diseases. Besides being delicious!
Beef	Beef is the classic red meat from cattle. It has an impressive nutrition profile and is packed with B vitamins, zinc, selenium, niacin, glutathione and iron.	Beef protein is highly nutritious and promotes muscle maintenance and growth. It is a good source of vitamin B12, essential to blood formation and for a healthy nervous system. It is also packed with glutathione which is linked to increasing longevity, preventing illness and reducing the risk of chronic or immune diseases. Also rich in L-carnitine that plays a substantial role in the metabolism of fat, it promotes heart health and weight loss and helps in fighting diabetes.
Broccoli	Broccoli is a cruciferous vegetable related to cabbage, kale and cauliflower. It's high in nutrients including fibre, vitamin C, vitamin K, iron, and potassium. It also boasts more protein than most other vegetables. Lastly, it's high in plant compounds associated with health benefits like sulforaphane.	In addition to being a low-calorie food, broccoli is also a great source of roughage (commonly called fibre) that helps to improve digestive health. Its vitamin K content promotes strong bones and is a great boost for puppies and kittens.
Topinambur (Jerusalem artichokes)	Topinambur (also known as Jerusalem artichoke) is a species of sunflower native to eastern North America. It's low in fat and a good source of nutrients, particularly iron, magnesium, phosphorus, potassium, inulin, niacin, thiamine, folate and vitamins C and K.	Thiamine and potassium promote robust muscle function and a healthy nervous system. Being rich in iron, topinambur is also very helpful for red blood cell production, while its inulin content promotes digestive health. Additionally, it is useful against bad cholesterol and high triglycerides.
Red berries	Red berries are loaded with antioxidants. They are very low in calories and fat and are among the healthiest fruits on the planet. They're a good source of fibre and vitamins A, C, E, and K. This group of berries includes blueberries, raspberries, red currants, blackberries, strawberries and cranberries.	Red berries are rich in fibre and antioxidants such as anthocyanins, ellagic acid, and resveratrol. These plant compounds help reduce the risk of disease caused by oxidative stress. They are a good source of fibre as well, as they slow down the movement of food through the digestive tract – thus reducing hunger and helping in weight management as well. Red berries also have strong anti-inflammatory properties and help stabilise blood sugar levels and insulin response.
Coconut flakes	Coconut is a fruit in the drupes family – inner flesh surrounded by a hard shell. Contrary to most fruits, coconuts provide fat and also contain protein, several minerals and B vitamins.	One of coconuts' main acids is lauric acid which is very helpful in repelling fleas. Their fatty acids have also been shown to help decrease inflammation and alleviate arthritic pain. Antioxidants boost the immune system and eliminate toxins.
Hemp oil	Hemp oil is a nutritional powerhouse that comes from the seeds of the hemp plant. These seeds don't contain the same levels of compounds as the plant itself. It is not psychoactive and has a rich profile of nutrients, essential fatty acids, plant sterols, antioxidants, vitamins and minerals.	Hemp oil has a myriad of benefits. It actively safeguards the nervous system protecting brain cells from toxicity. Hemp oil has also been shown to decrease the production of inflammatory cytokines, thus making your pet's immune system stronger and also helping reduce subsequent pain and anxiety. Furthermore, it is great for the heart, protecting blood vessels from damage and helping reducing heart rate and blood pressure. The use of hemp oil also increases the levels of fatty acids in the skin and helps reduce skin dryness and itching being a major contributor to fighting skin disorders like eczema or dermatitis.
Ascophyllum nodosum (pure seaweed extract)	Ascophyllum nodosum, also known as egg-wrack, is a brown seaweed that can grow up to 2 metres long and that can be found mainly in the North Atlantic. It's most notable as a source of micronutrients, including over 60 minerals.	The combination of minerals and trace elements in Ascophyllum nodosum is incredibly useful to promote oral health and to prevent plaque. Its fibre, insoluble and resolute, acts as a brush cleaning up the stomach from bacteria, while also working as an anti-inflammatory.
